## Water On Wheels

Water On Wheels, is an educational program teaching K-12th grade students about groundwater flows and best management practices. The program goal is to teach all 27,000 students in the three county area within three years at the rate of 9,000 students per year. Water on Wheels (WOW) offers FREE lessons for Kindergarten through high school public and private schools, and informational presentations at community events throughout eastern Washington. WOW lessons include lively hands-on demonstrations, educational games, and grade-level materials to help give students a better understanding of water, soil and energy conservation. Teachers are able to have just one lesson or a series of conservation minded lessons presented over a period of time. All lessons are aligned with Grade Level Expectations in science and can be easily integrated into your existing curriculum. Many of the lessons compliment the existing STC Science Kits being used throughout eastern Washington.
